

What can interactive web applications do for you?

Revolutionize data exploration

Streamline analysis and reporting

Data entry and quality control

Catalyze stakeholder engagement

Conduct fishery assessment

Guide management decisions

Synthesize. Analyze.
Communicate.

We use R Shiny to build interactive web applications to make data visualization and scientific analysis accessible.

Ask us about
support bundles

Includes hosting and incremental updates to your app's features to ensure utility, relevance, and visibility.

Know of a fishery facing a challenge?

Our fisheries consultants focus on solution-generating science with application to real-world problems in fisheries management.

Consultant Services

Solution-generating science

We specialize in quantitative fishery science and decision-support science. Statistical analysis of ecological & fishery data, data limited methods, stock assessment, fishery improvement projects, and management strategy evaluation (MSE).

Applied capacity building

We provide custom training solutions to address capacity building needs. We commonly link solution-generating science with capacity building, addressing pressing challenges while providing improved technical skills for your team.

Engagement & communication

Thoughtful engagement with clients and communities is central to what we do. We provide professional communication materials and interactive R shiny web applications.
